CHOOSE any Options lantern :

THINK : Do you want Automatic Operation?
If so you will need the conversion module (sold separately).

INSTALL : It only takes minutes to make your home a safer place to live.

A NEW CONCEPT IN LIGHTING!

Options - more choice
- more control

Sensor module

3 options in one sensor

night sensor
motion sensor
night & motion sensor

Converts any OPTIONS lantern to Automatic operation

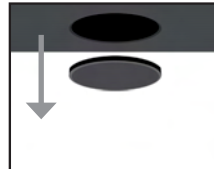

A - Allows selection of either Night Sensor, Motion Sensor or Night & Motion Sensor modes.

B - Controls the brightness of dimmed operation (0 - 50%) when Night & Motion mode is selected.

C - Controls at what level of darkness the associated light fitting begins to operate each evening.

D - Controls how long the associated light fitting illuminates when triggered by motion.

Step 1 - Remove the module cover from your lantern. This module will only operate with an OPTIONS Lantern, it cannot be incorporated into any other product.

Step 2 - Insert the sensor Module; it will only fit in one position. Press and slide to secure. It will lock in place when properly located.

Step 3 - Rotate the sensor clockwise and the control adjusters will be exposed. Set the adjusters to meet your needs (full setup instructions are enclosed).

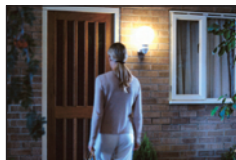

Step 4 - Once set, rotate the sensor anti-clockwise to conceal the control adjusters.

Night Sensor Mode

The unit will illuminate automatically each evening at a level of darkness set by you, and will remain illuminated throughout the night, switching itself off at dawn. This mode is ideal for use with low energy lamps.

Motion Sensor Mode

The unit will begin to operate at a level of darkness set by you, illuminating only when the sensor detects movement. The unit will then remain illuminated for a period set by you, returning to the off position when activity ceases.

Night & Motion Sensor Mode

The unit will operate as per the Motion Sensor mode except that at dusk the unit will illuminate at a dimmed level set by you (0-50%), switching to full brightness when motion is detected, returning to the dimmed level when activity ceases and switching off completely at dawn.
